

Elistair Unveils its New Tethered Power Module for the DJI M30 Drone.

Lyon, France / Wilmington, North Carolina, April 19, 2023 - Elistair unveils its new tethered power module for the DJI M30 drone, compatible with the Ligh-T and Safe-T Ground Power Stations and allowing hours of uninterrupted flight up to 70 meters in height.

Designed to meet the needs of police, firefighters, and first responders who require a continuous aerial view with minimal logistical impact, this new retrofit module allows operators to benefit from the M30's capabilities for more extended-duration missions such as event protection, firefighting, border surveillance, and response support.

The onboard module allowing the tether power supply weighs only 500g and is easily fixed at the back of the drone. It offers a continuous power of 1000 Watts, allowing hours of flight at 70 meters without interruption, and resists temperatures between -20°C and +50°C. It also allows the operator to quickly switch from free flight mode to captive flight mode.

"Our goal is to offer great flexibility to Law enforcement and first responders by continuously enhancing our compatibility with the most suitable drones for security missions. We offer the widest range of air modules, and the development of a module dedicated to the DJI M30 was highly anticipated. The main

challenge was to develop a module that was light and powerful enough to allow operators to fully exploit the observation capabilities of the M30 thanks to an optimal flight altitude." said Guilhem de Marliave, Elistair CEO.

With more than 1,000 tethered drone stations deployed worldwide by security forces, Elistair relies on nine years of experience and close collaboration with its customers to always offer more efficient products without compromising ease of use.

With a wide range of air modules, a single Elistair station can be connected to more than 40 UAVs, allowing operators to choose the most appropriate solution for each mission.

Orders for the new module are now open, and deliveries will start on April 30. Elistair is organizing an online demonstration of its new DJI M30 module on April 27. Registration is open to all at this link: <https://elistair.com/online-events/>

About Elistair

The "Tethered Drone Company" - Elistair is the leading manufacturer of tethered drone systems for persistent surveillance and tactical communications. The company's products are used and deployed by armed forces, law enforcement, civil security, and private security in over 70 countries for event protection, perimeter surveillance, border protection, and pop-up communications. Elistair's offices are in France, the United States, North Carolina, and the Ivory Coast. Visit our website: <https://elistair.com/>
